CODE VALIDATION

VALIDATION PROCESS

STEP	DESCRIPTION	REASON
1	Opened validator.w3.org/nu and uploaded each page	Shows any broken tags, missing attributes, or other HTML problems
2	The checker highlighted lines in red (real errors) and yellow (info / warnings) I fixed the red ones first, refreshed the file, and ran the checker again until I saw a green "No errors" bar (screenshots attached)	Green bar = the page is now valid HTML
3	Opened jigsaw.w3.org/css-validator and uploaded my CSS file Cleared all red error lines the same way, then reran until I got the green bar	Ensures the CSS is readable by every browser.
4	Re-ran the HTML checker on the pages that had previously complained about CSS in <style> blocks; all came back clean	Confirms nothing new broke in the process

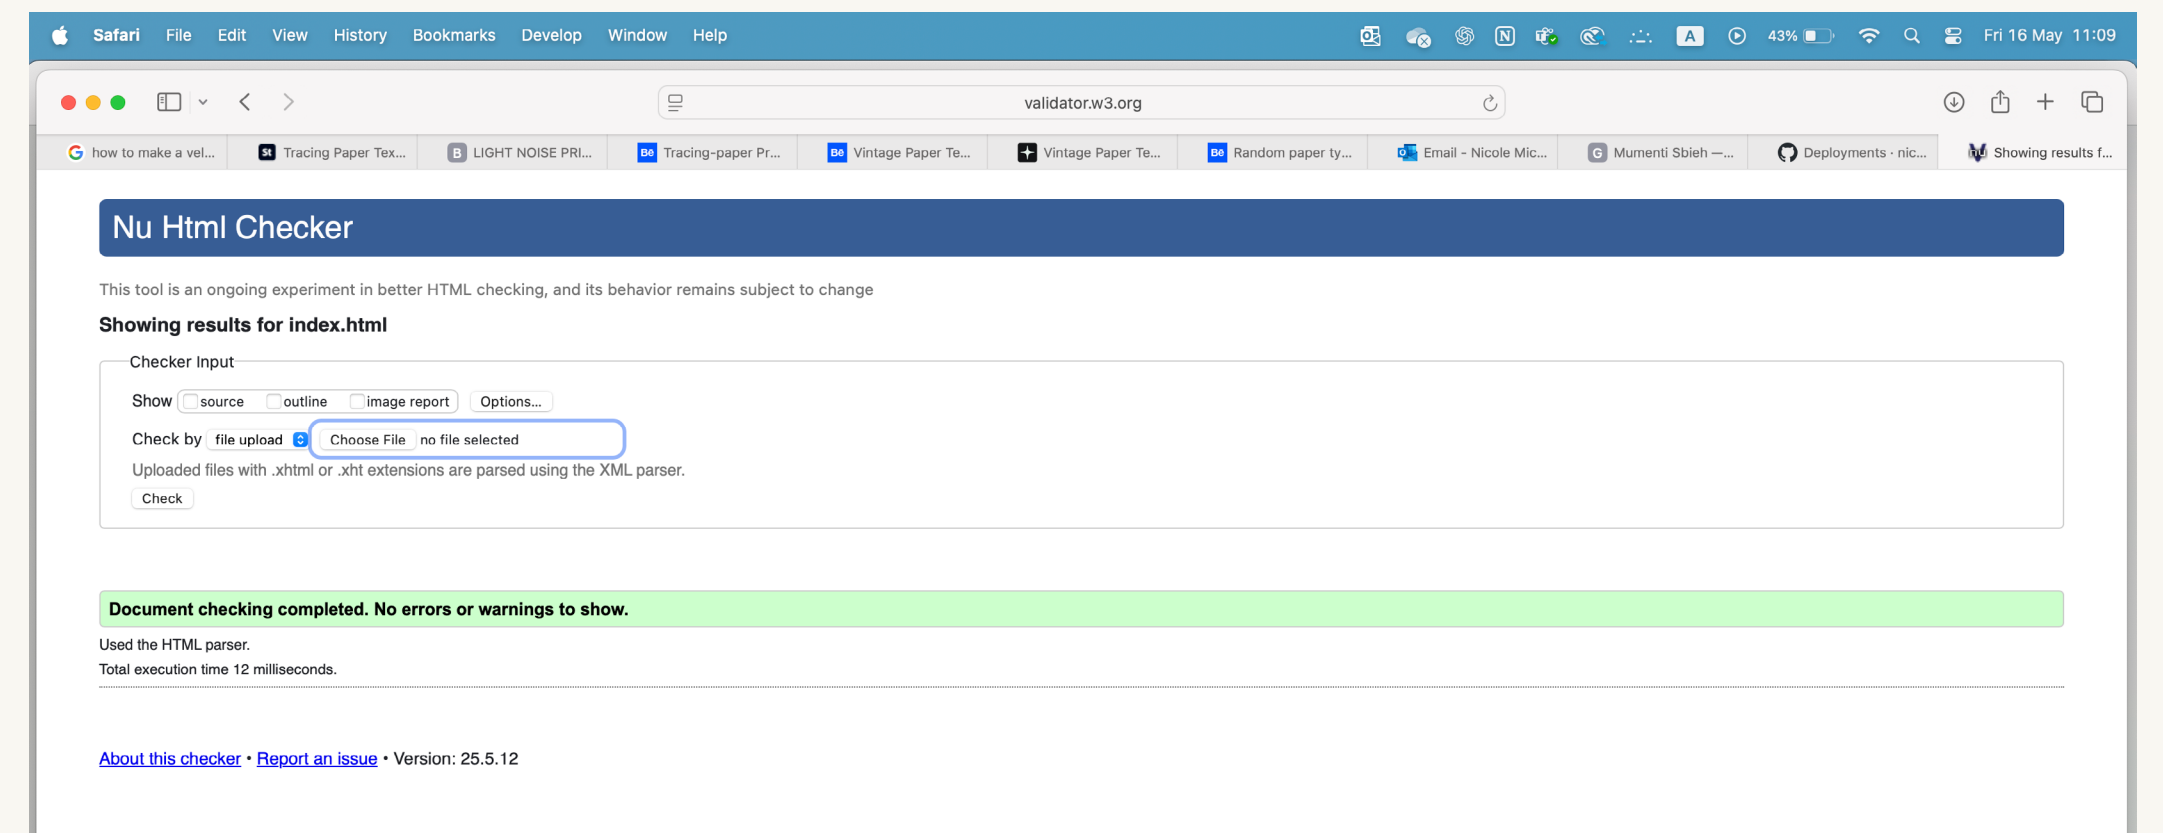

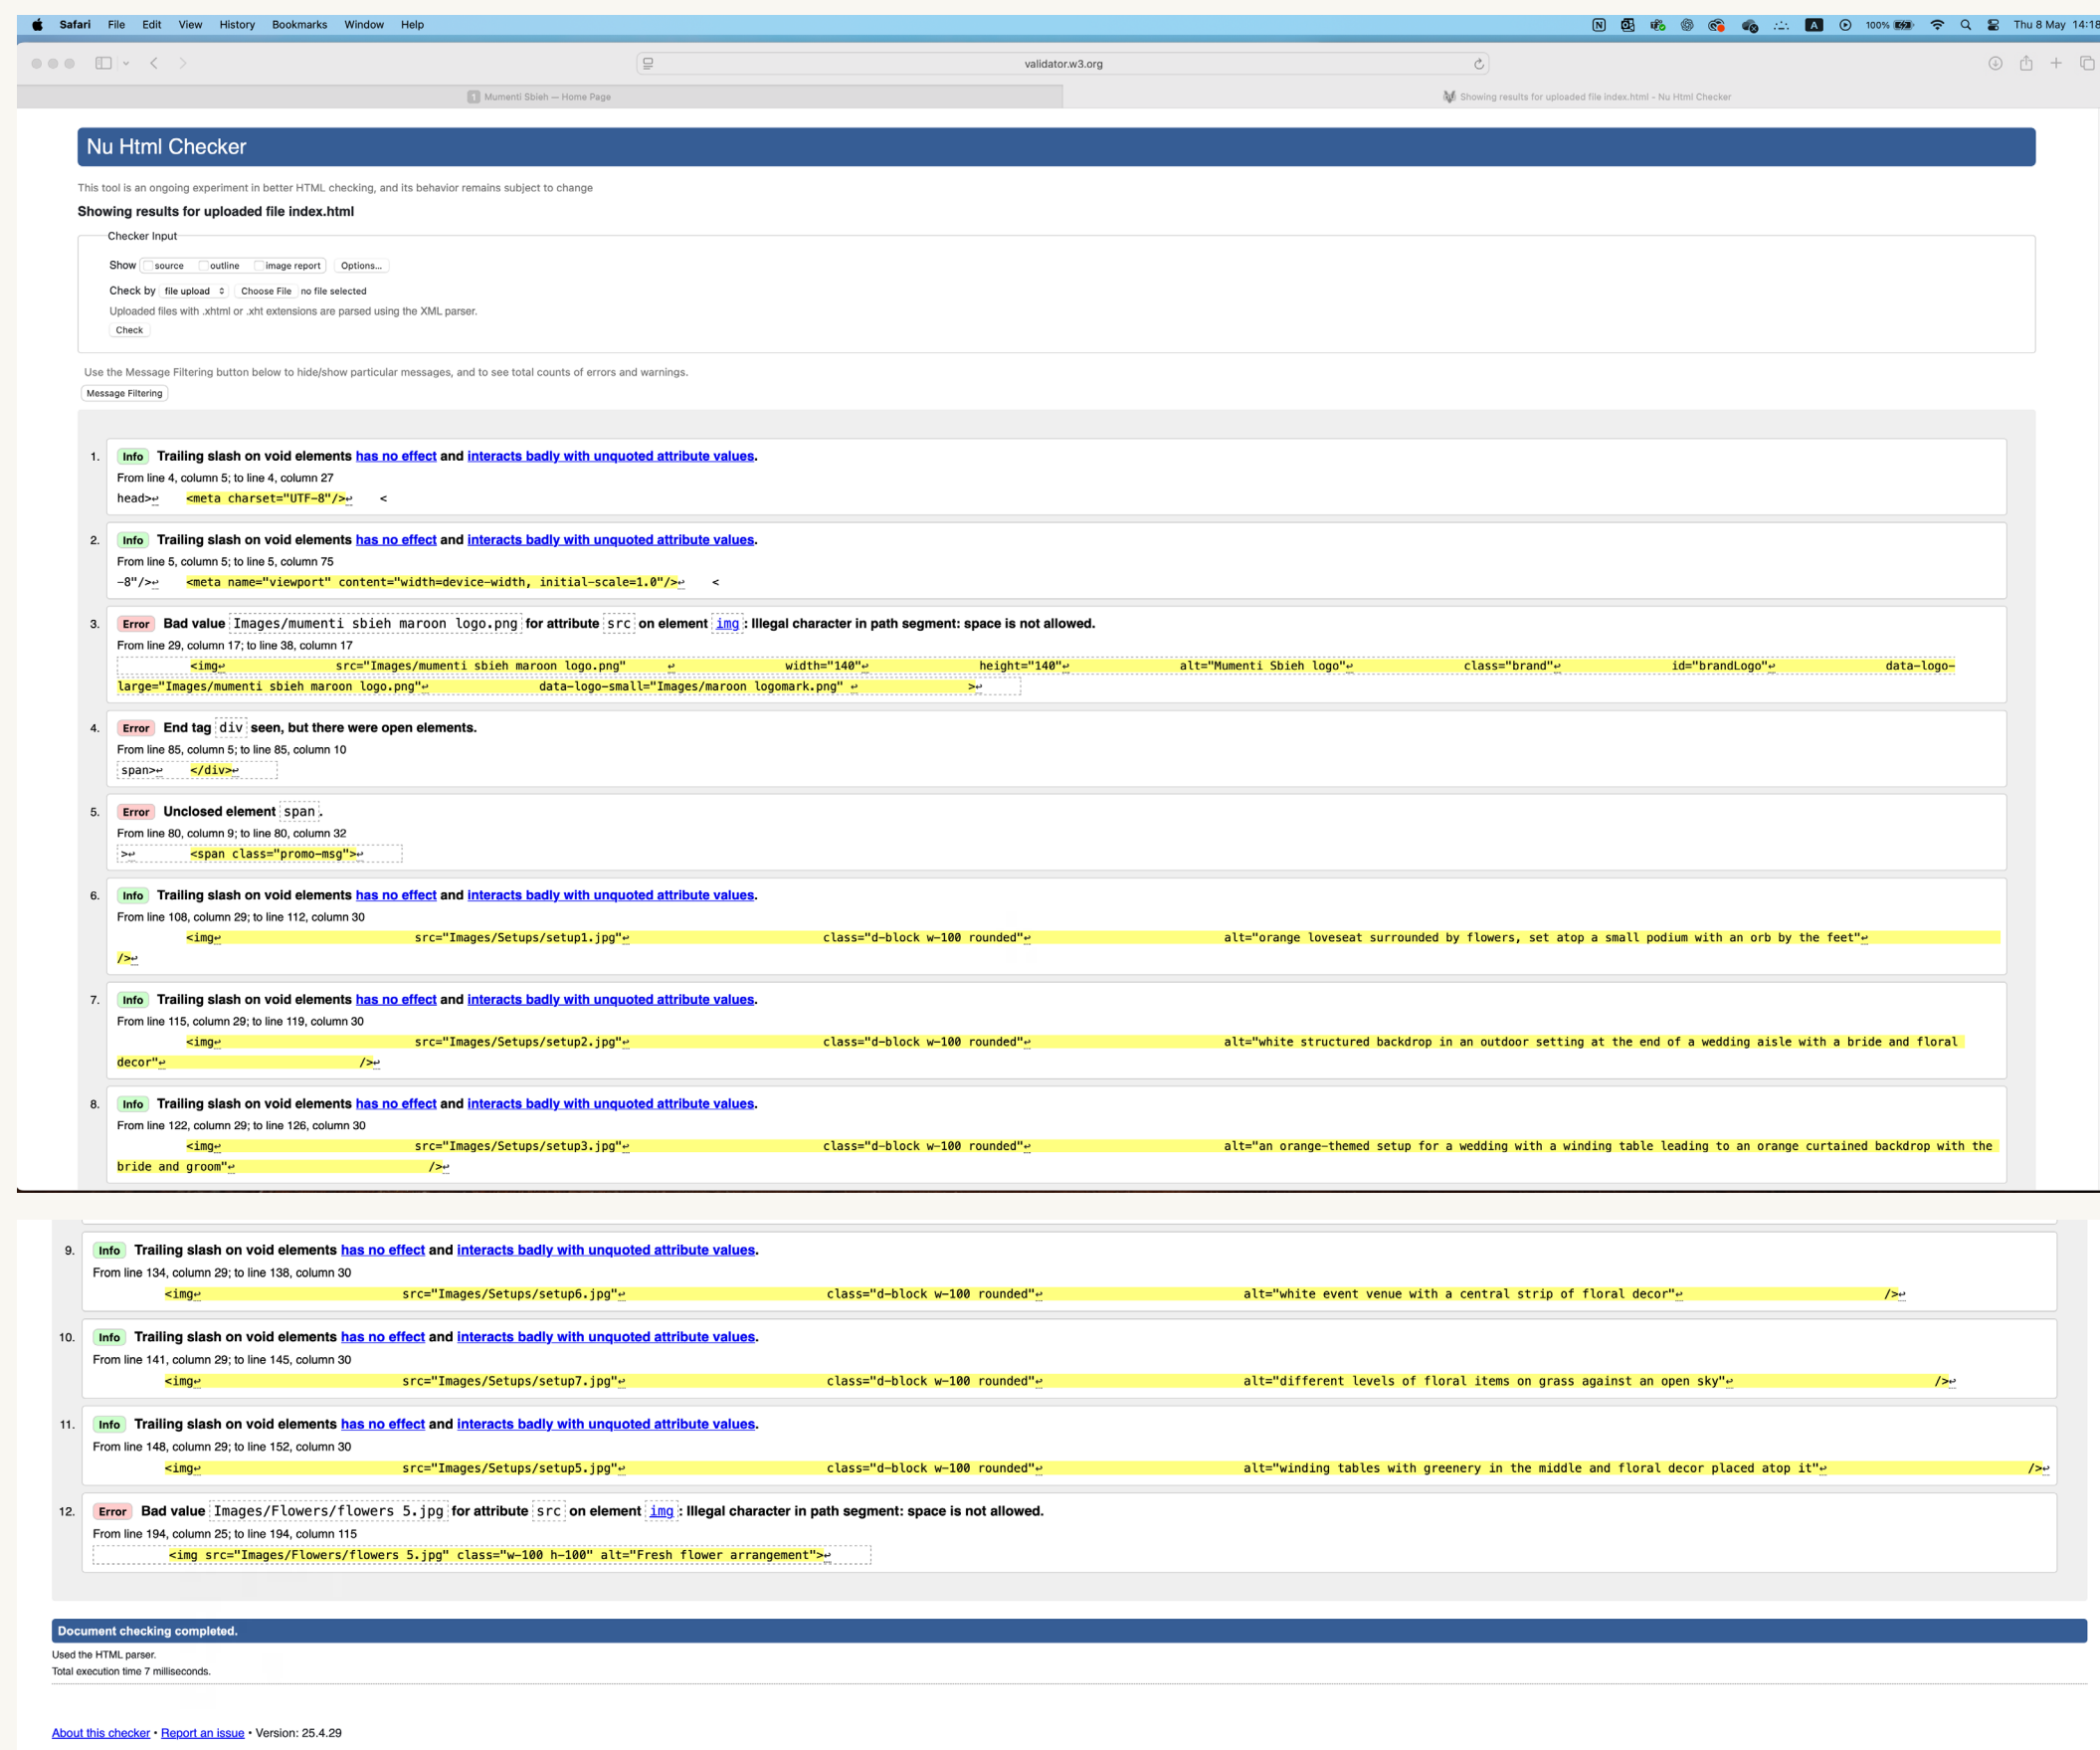

ISSUES FOUND & FIXES APPLIED

ISSUE FLAGGED	DESCRIPTION	FIX APPLIED
Bad image path – “space is not allowed”	Some file names contained spaces (mumenti sbieh maroon logo.png)	Renamed them with dashes (mumenti-sbieh-maroon-logo.png) and updated every link
Image missing alt text	The picture had no description for screen-readers.	Wrote a short alt text, e.g. “Pink peony bouquet on a pedestal”
Unclosed / stray tags (<div>, , <section>)	I opened a tag but forgot to close it, or closed in the wrong order	Added the missing closing tag at the right spot
Trailing “/” on void elements ()	The slash isn’t wrong but can confuse older tools	Removed the extra / so it reads .
Attribute “disabled” not allowed on <a>	The HTML spec only lets buttons use ‘disabled’	Replaced with Bootstrap’s .disabled class plus aria-disabled=“true” so the link still looks inactive when the cart is empty
Font-style set to “medium” in CSS	“Medium” isn’t a valid font-style; I meant font-weight	Changed to font-weight: 500
Padding-top: .25; (no unit)	The validator needs a size unit like rem	Wrote .25rem
Nested CSS rules	Browsers ignore that in plain CSS	Flattened them: .btn .icon{...}
White-space: max-content	max-content isn’t a correct value for white-space	Used width:max-content instead – what I originally intended
Carousel images too tall / uneven	Visual, not an error, but looked messy	Added a helper class: aspect-ratio:4/3; object-fit:cover; max-height:280px; so all sizes match

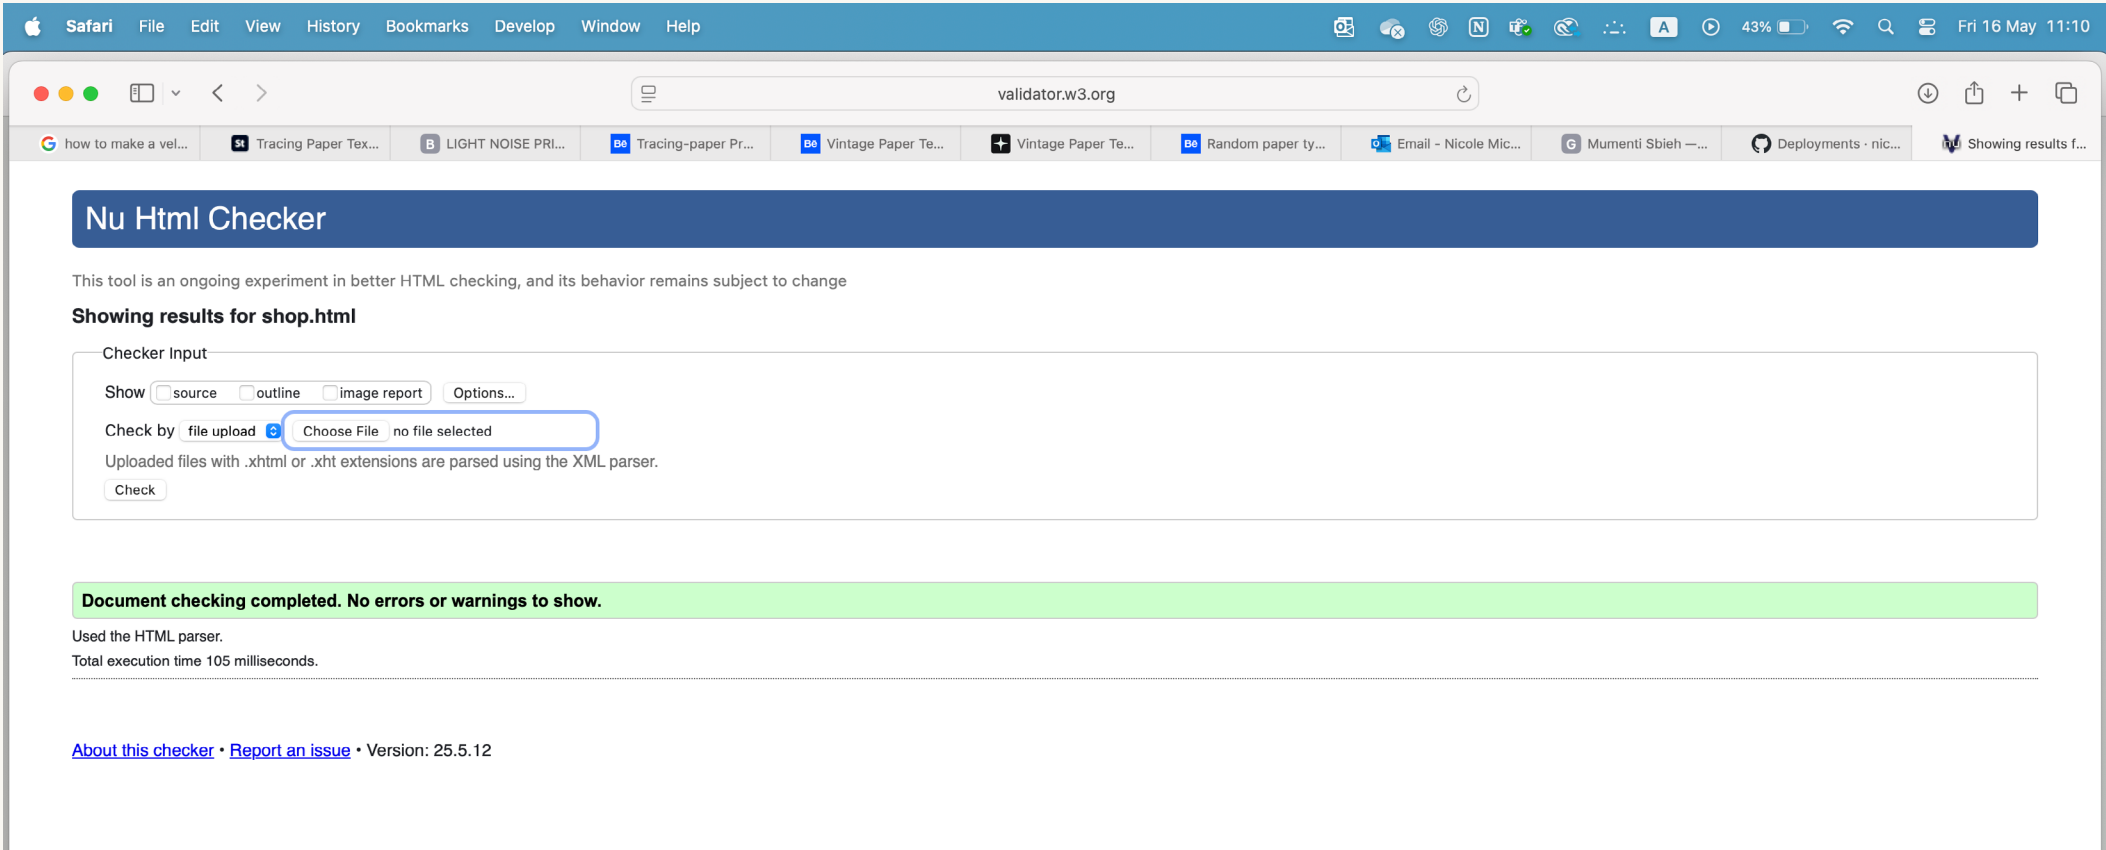

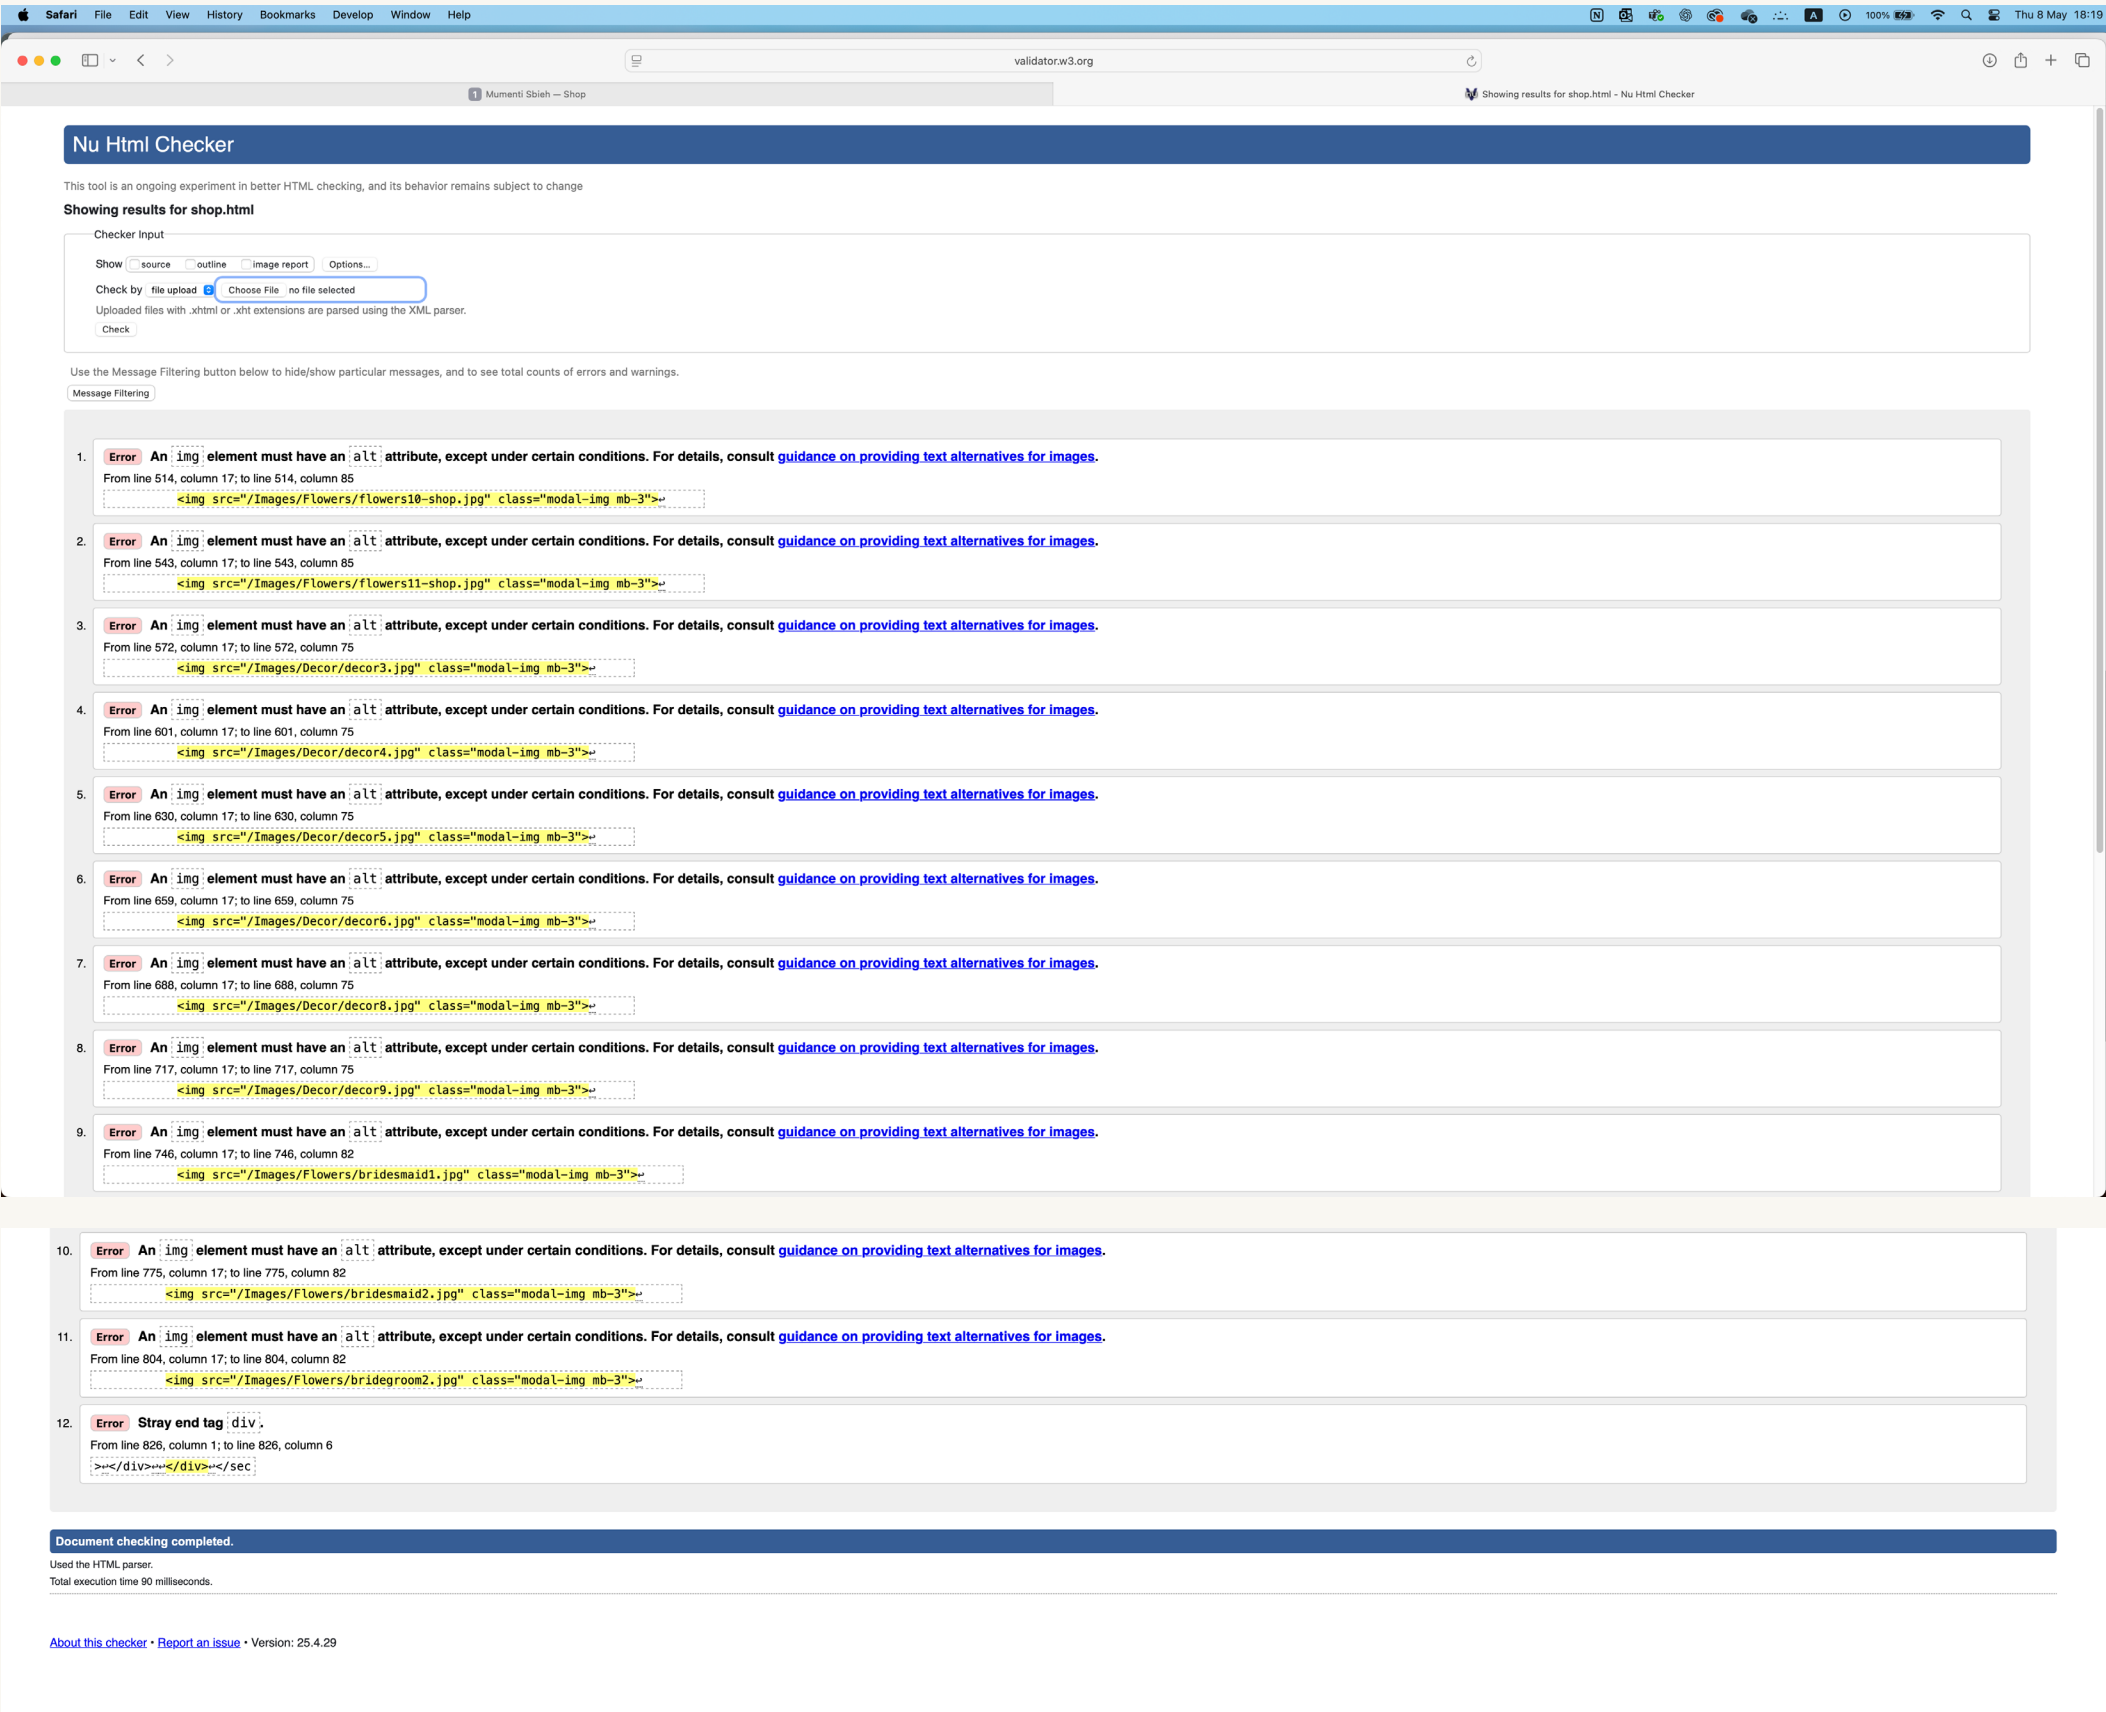

RESULTS

- index.html, shop.html, portfolio.html, aboutus.html, contact.html, cart.html, checkout.html, faq.html, terms.html, privacy.html, userlogin.html, eventboard.html, error404.html now all return "Document checking completed. No errors or warnings to show."
- style.css returns "Valid CSS" (only grey informational notes remain, e.g. "CSS variables not statically checked")
- The site now loads without console warnings and is friendlier for assistive technology because every image has proper alt text and every interactive element uses the correct attributes

TOP

The screenshot shows a Safari browser window with the address bar displaying 'jigsaw.w3.org'. The main content area shows a CSS file named 'style.css' with line numbers 75 to 754. The CSS code includes various rules and comments. A red vertical line highlights a section of the code. The browser's address bar shows 'jigsaw.w3.org'.

CSS VALIDATION

3

EVALUATION

CURRENT ISSUES

- **Responsive buttons**

On phones some “Add to cart”, “CTA”, and filter buttons stay narrow instead of stretching the full width. Small targets are hard to tap, which fails mobile-friendly test

Potential fix: Add w-100 or Bootstrap’s d-grid gap-2 around button rows at ≤ 576 px, then retest breakpoints

- **Tight layouts on very small screens**

Portfolio hero text and three-up images feel cramped below 360 px wide. This means visitors on phones like older iPhones have to zoom

Potential fix: Add col-12 col-sm-10 mx-auto wrappers or increase padding with p-3 inside those sections at the xs breakpoint

- **GitHub Commit messages**

Most GitHub commit summaries are dates. While not a major blocker at this point, it may be down the line if anything would need to be traced back or adjusted.

Potential fix: For future commits, I aim to follow the “imperative mood + what + why” rule, e.g. “Fix mobile nav: remove duplicate listener”

LESSONS LEARNED

- Keep image names and data-IDs **free of spaces**
- **Avoid self-closing slash** () in HTML5
- **Short, meaningful GitHub commit summaries** save time when rolling back

FUTURE IMPROVEMENTS

- Extra store filters (price range, "sort A-Z / €-€€") for faster product discovery
- Quantity selector on the product cards so that the user can adjust totals without opening the product modal
- Slide-out mini cart in addition to cart page allowing the user to check their totals without navigating away from their current page
- Completing the missing pages such as 'Event Board', 'User Login', 'User Dashboard' and project portfolio pages for the user to experience complete journeys on the site
- Real checkout & payments
- Accessibility upgrades such as ARIA tags to the cart badge so that screen readers are able to announce items added to the cart
- Search bar functionality to make the site easier to browse

THANK YOU!
